

TransOceanic
Wind Transport

**An exceptionnal sea
ageing**

Why choose dynamic ageing today?

A traditional method reinvented to create value

A market seeking added value

- Brands are looking for concrete ways to stand out.
- Consumers want authenticity and real stories.

A response to CSR challenges

- Low carbon footprint thanks to sailing.
- Added value during transport, no additional energy consumed.

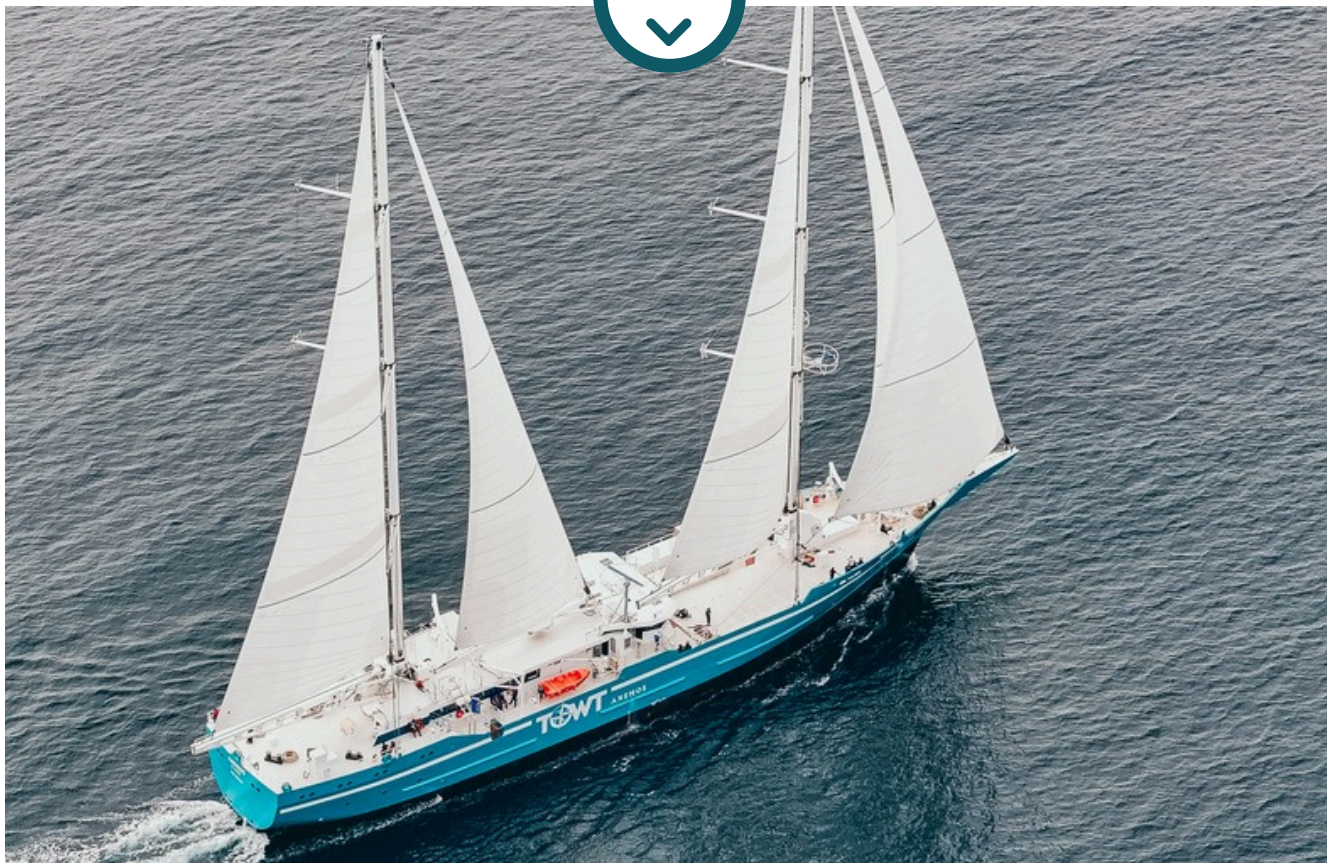

The sea as a living cellar

- Transportation ≠ simple logistics → becomes a tool for transformation.
- Accelerated aging + unique aromatic profiles.

Heritage & modernity

- Historical practice of fine wines and spirits.
- Modernized thanks to onboard tracking technologies (sensors, hygrometry, temperature, movement).

From old sailing ships to modern cargo ships

Expertise rooted in maritime tradition

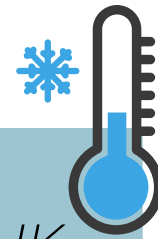

- Since 2011, TOWT has been the leading transporter of barrels by sail on old rigs and cargo sailing ships.
- We gained experience on old rigs before launching our own modern cargo sailing ships.

A modern fleet

- Launch of our two twin ships of the Phoenix class in 2024.
- A combination of maritime heritage and technological innovation (connected hold, real-time tracking).

Choose your route and conditions

Cold waters (Anemos)

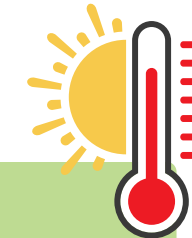

Routes: New York, Quebec, Fécamp, UK

Characteristics:

- Stable temperatures (10°C – 18°C)
- Slower and more consistent aging
- Preservation of freshness and balance of aromas

Warm waters (Artemis)

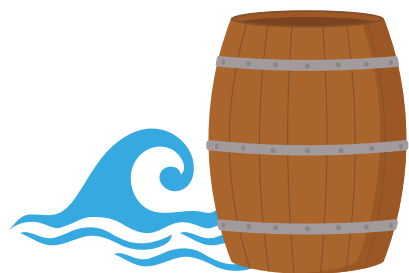

Routes: Colombia, Guadeloupe, Brazil, Cuba

Characteristics:

- Higher temperatures (64°F–81°F)
- Accentuated fruity and rounded notes
- Faster and more expressive aging

Annual temperature of
ocean areas

Possibility of brushing barrels with seawater*

- **Improves wood porosity**
- **Promotes tannin integration**
- **Brings conditions closer to those of historical maritime transport**

Transport time for barrels

6

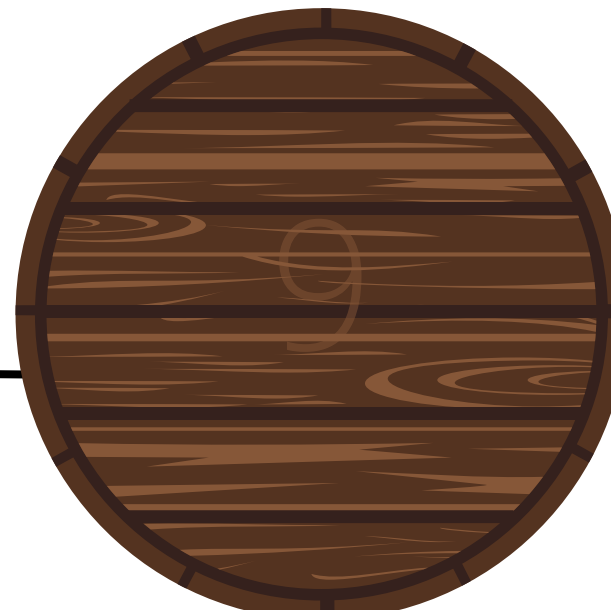

months

- Medium aging
- Ideal for light aromatic notes

9

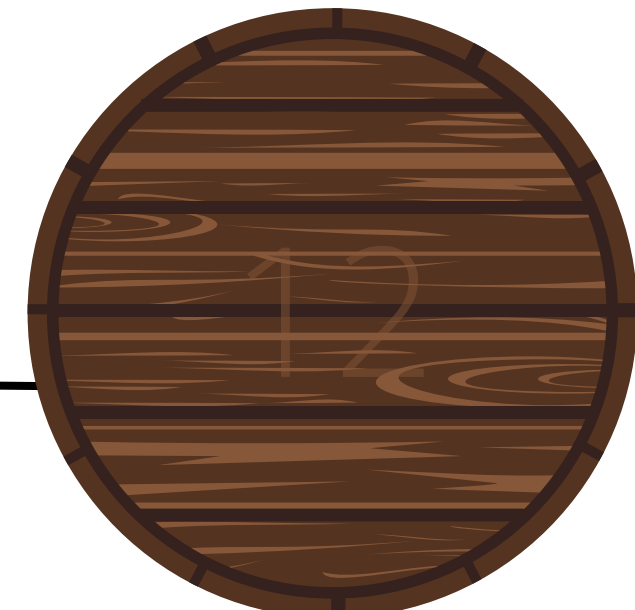

months

- Balance between intensity and freshness
- Rounded aromatic profiles

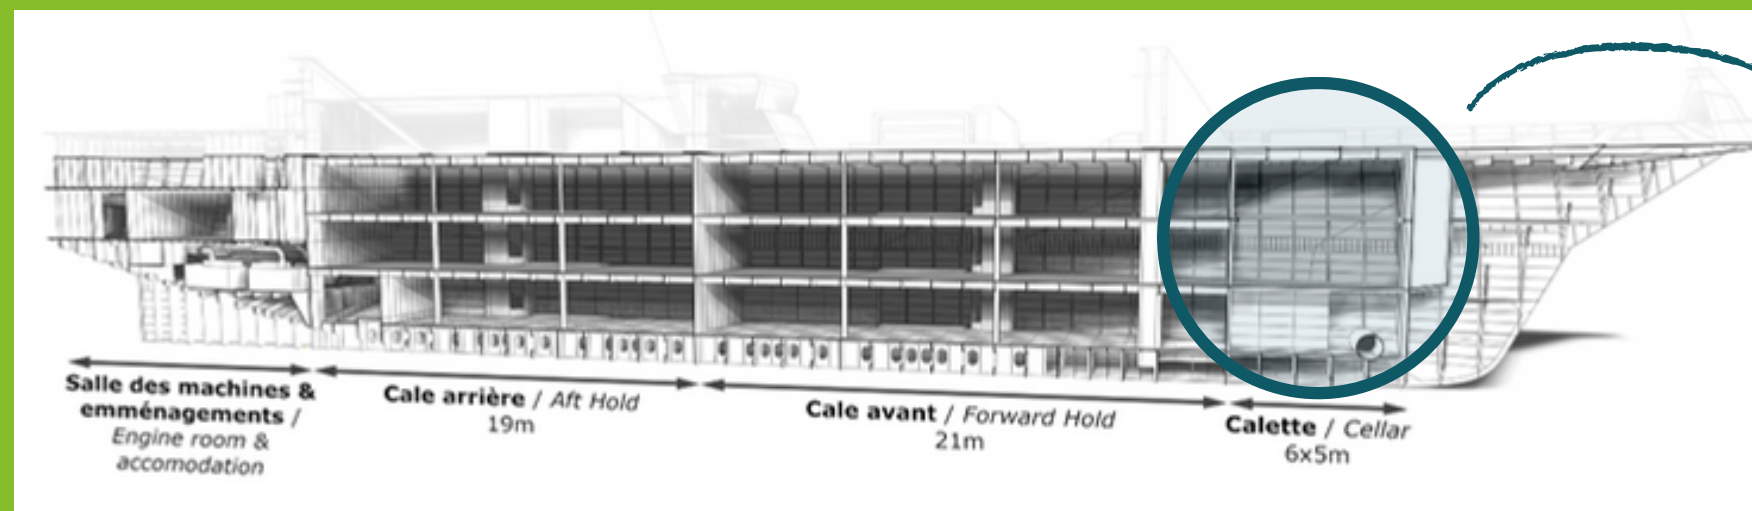

12

months and +

- Fully aged
- Powerful aromas, mellow tannins
- Perfect for products with a strong identity

Our dedicated space

- Floor space: 24 m²
- Height: 2 barrel heights
- Capacity: 120 barrels of all types
- Location: forward hold of the ship

Temperature

Maintains sea level + continuous recording

Humidity

Continuous monitoring to prevent sudden fluctuations

Wave height & movement

Sensors measuring roll/pitch

Smart, connected wine cellar → access to real-time data

A unique experience

Visit on board during breeding

- Option to come and sample the product during the crossing
e.g. for a 6-month aging process → tasting possible after 3 months)
- Exclusive tour for 3 to 4 people
 - Small event on board:
 - Flagging of the ship* (flag to be hoisted)
 - Guests leave with the flag!

*cost not included in the offer**

Monitoring & Anemos Label

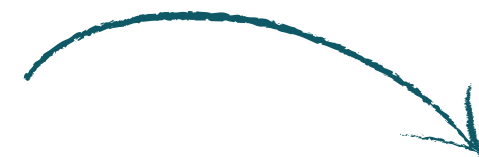

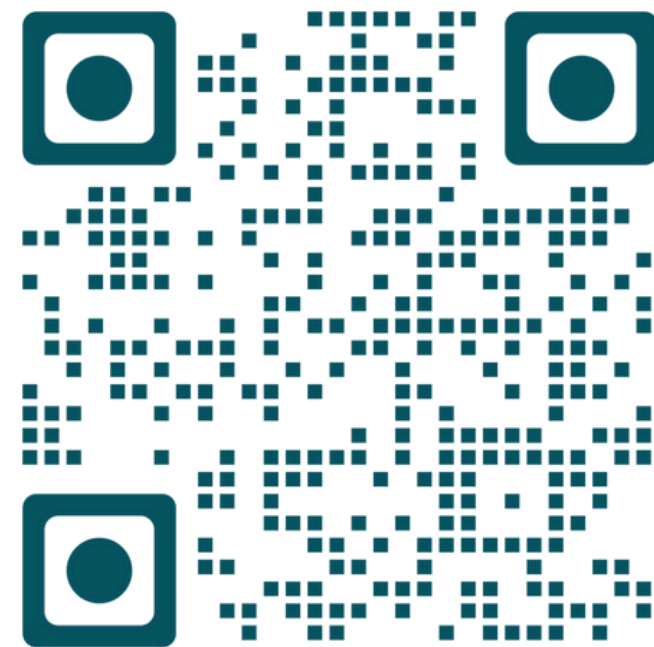

- Complete trip tracking by Label Anemos
- Logbook provided for each crossing:
Temperature, Energy data, GPS track, Travel information (dates, stopovers, duration)
- Traceable data that can be used for your communications

An adventure to share

TOWT also invites you to embark with your barrels and enjoy the experience of dynamic aging at sea. Immerse yourself in the journey, discover how your products evolve, and share every stage of a unique voyage.

Anemos demo logbook

In 2026: a free crossing! One charger will be selected and will have the unique opportunity to enjoy the experience on board with their barrels.

New York - 2025

Santa Marta - 2024

Québec - 2024

Brésil - 2024
